PROFESSIONAL SUMMARY

Full-stack software engineer and CS undergraduate with proven ownership across the stack — from smart contract architecture to computer-vision inference to production frontend delivery. Has independently led two end-to-end engineering builds (MediTrace, Nourish) spanning Web3, ML, and mobile, alongside applied data science experience in EDA and predictive modelling.

TECHNICAL SKILLS

Languages: Python, Java, JavaScript, TypeScript, Solidity, Dart, SQL, HTML5, CSS3

Frontend: React.js, Next.js, React Native, Tailwind CSS, Bootstrap, Three.js

Backend & Web3: Node.js, FastAPI, Hardhat, Ethers.js, Arbitrum Sepolia L2, Web3.py, RESTful APIs, WebSockets

Data Science & ML: OpenCV.js, YOLOv8, Scikit-learn, XGBoost, CNN, NSGA-II, Exploratory Data Analysis (EDA)

Databases & Tools: Supabase, PostgreSQL, MySQL, Firebase, Git, GitHub, VS Code, Postman, Vite

TECHNICAL PROJECTS

MediTrace | Full-Stack & Web3 Lead Developer

Next.js, Solidity, Arbitrum Sepolia L2, Node.js, OpenCV.js, Supabase, Tailwind CSS

- Architected a decentralized pharmaceutical traceability platform integrating EVM smart contracts with simulated IoT cold-chain telemetry (2°C-8°C).
- Engineered cryptographic host-domain whitelisting on the Pharmacy Inspector Terminal, neutralizing phishing, DNS spoofing, and lookalike domain attacks.
- Deployed an event-driven off-chain blockchain indexer on Arbitrum Sepolia L2, firing sub-second asynchronous webhooks for real-time alerts.

Nourish - Intelligent Dietary Systems | Lead Software Engineer & Co-Author

React Native, TypeScript, YOLOv8, NSGA-II, FastAPI, Supabase

- Developed a full-stack mobile dietary analytics app integrating real-time computer-vision inference with algorithmic meal synthesis.
- Deployed custom-trained YOLOv8 object-detection models to classify food items from live camera feeds with high accuracy.
- Implemented an NSGA-II genetic algorithm in Python/FastAPI to balance multi-objective nutritional and caloric optimization constraints.

WORK EXPERIENCE

YuvaIntern | Junior Data Science Analyst - Agribusiness (Remote)

08/2026 - 09/2026

- Analysed agribusiness datasets via Exploratory Data Analysis and statistical modelling, improving supply-chain efficiency and price-indicator accuracy.
- Engineered automated Python data pipelines for cleaning and normalization, eliminating record anomalies across large-scale datasets.
- Built predictive regression models forecasting commodity price movements, delivering analytical reports for data-driven operational decisions.

Cod Soft | Full Stack Development Intern (Remote)

06/2024 - 07/2024

- Shipped 3 production-ready, responsive web applications using TypeScript, React.js, and CSS within 4-week Agile sprints.
- Optimized UI component architecture, resolving cumulative layout shift (CLS) issues and cross-browser rendering inconsistencies.
- Architected end-to-end client-server integrations, connecting decoupled frontends to RESTful API endpoints for scalable data exchange.

EDUCATION

Quantum University, Roorkee, Uttarakhand - B.Tech, Computer Science & Engineering (CSE Core)

Expected 06/2028

Minor in Data Analytics | Cumulative GPA: 8.01 / 10.0

Coursework: Data Structures & Algorithms, Database Management Systems (DBMS), Machine Learning, Object-Oriented Programming (Java), Computer Networks
